

AMO IMMUNIZATIONS GUIDE

Required Immunizations

AMO and our rotation sites require the following immunizations to reserve an experience. Some of these require multiple vaccines over a scheduled time frame. For this reason, it is essential that you schedule them well in advance of your trip to the United States.

Did you know immunizations prevent up to 3 million deaths per year?

THE IMPORTANCE OF IMMUNIZATIONS

For your safety and the safety of the patients you will be working with, AMO and our physicians require you to complete all vaccinations prior to your rotation start date. We understand they can be time-consuming and costly, but vaccinations must be a priority when planning for your rotation. **Failure to provide all required immunizations may result in a delayed start date or even cancellation.**

By having the proper immunizations, you can decrease your chances of sickness in the United States. This is especially important while traveling as dehydration from flying, a change in dietary habits and less sleep (all possible during your rotation in the U.S.) can lower your immune system's response, making it more difficult to fight off disease.

Completing your required immunizations in a timely manner will help ensure the rotation start date is not delayed and can help make sure that the only thing you bring back to your home country are souvenirs and possibly a letter of recommendation from your supervising physician.

MMR Vaccine

(including IgG serology)

Influenza Vaccine

(October-April)

Tdap/DTap Vaccine

(pertussis containing within the last 10 years)

Varicella Vaccine or date of illness

(including IgG serology)

Anti-HBs Immune Report

COVID-19 Vaccine

(date of final dose)

PPD Test

(taken within last 6 months)
